TECHNICAL SKILLS

Strong: Javascript | ReactJS | Vue.JS | Node.JS | Express | RESTful APIs | Axios | MongoDB | Mongoose | HTML5 | AngularJS | Knex | MySQL | Semantic UI | JSON Web Tokens (JWTs) | Passport | bcrypt |

Experienced: Redux | jQuery | CSS | Flexbox | AWS | Webpack | Git | Ruby |

APPLICATIONS

Romp, *Full-Stack Software Engineer, github repo*

A meetup-inspired application that connects gamers. Users have the ability to create local and remote gaming events, search for information on games, users, and events based on name, time, location, and more.
- Dynamically render a multipage UI using react with redux and react-router
- Created backend routes to retrieve relevant information and query IGDB API using Axios to fetch game data
- User Authentication through Passport utilizing JSON Web Tokens (JWTs)
- Created database schema to handle Users, Events, Friends, and Teams using MongoDB with Mongoose

The Known Project, *Full-Stack Software Engineer*, *github repo*

A responsive information utility to navigate the current tech industry landscape using semantic relationship filters
- Display core company data using React to manage a single page responsive web app
- Designed a mySQL database to organize information held in .csv files retrieved from Crunchbase API
- Deployed using Amazon Web Services (AWS)

API for your IPA, *Frontend Software Engineer, github repo*

Research and explore beers from BrewDog Brewery's inventory line.
- Designed a responsive, single page website using AngularJS and Node.JS w/ Express connecting to PunkAPI
- Query API through beer name, description, type, food pairings, etc. and dynamically render on single page

WORK EXPERIENCE

Torque Group Global   *Melbourne & Sydney, Australia*
Sales and Marketing Contractor   *2016-2017*
